ITGAV wt Allele

National Cancer Institute

Source

National Cancer Institute. *ITGAV wt Allele*. NCI Thesaurus. Code C53663.

Human ITGAV wild-type allele is located within 2q31-q32 and is approximately 90 kb in length. This allele, which encodes integrin alpha-V protein, is involved in cellular adhesion and signal transduction. Variant alleles are associated with several types of human cancer and play a role in metastasis.
