Potential competing interests: No potential competing interests to declare.

Abstract:

- The abstract is comprehensive but could be more succinct. Clearly state the main findings and their implications in the last few sentences.

Introduction (Section 1):

- Consider summarizing the historical context more briefly and focusing more on the specific aims and significance of the study.

Science in British India (Section 2):

- Ensure the historical narrative directly ties back to the study's objectives. This section is rich in detail but should consistently highlight its relevance to the research question.

Objectives (Section 3):

- The objectives are clear, but reiterating them briefly in the introduction could help frame the study better from the outset.

Methodology (Section 4):

- Provide more detail on the data cleaning and analysis process. For instance, explain the criteria for removing stop words and the rationale for selecting specific keywords for analysis.

Results (Section 5):

- The results are well-presented. However, integrating some visual aids (e.g., graphs, charts) to complement the word frequency tables could provide clearer insights.

Conclusion (Section 6):

- The conclusion should briefly summarize the main findings and suggest areas for future research. Highlighting the practical implications of these historical insights for modern medical research would strengthen the conclusion.

Overall Recommendation

This manuscript presents a valuable historical analysis and is suitable for publication in Qeios with minor revisions. The suggestions provided aim to enhance the clarity, impact, and readability of the paper. The authors should focus on streamlining the introduction, providing more methodological detail, and ensuring the results and conclusions are directly tied to the research objectives.

Thank you for the opportunity to review this insightful study. I look forward to seeing the final version published.
