Potential competing interests: No potential competing interests to declare.

The research is valuable and was written well. But some considerations are needed.

- 1- The references need to be revised thoroughly, not ordered; some are missed and not written uniformly.
- 2- There is no reference for the tested doses. Why did you choose these concentrations? On which basis?
- 3- You didn't mention the death rate of the mice. Was it a long duration for the experiment?
