The following are my comments and suggestions for the manuscript. Kindly consider.

- The Abstract does not represent the novelty of the present work clearly and hence, needs to be revised. Further, the need for the research and the outcomes should be mentioned.
- The Abstract should have one sentence per each: context and background, motivation, hypothesis, methods, results, and conclusions.
- The research gap and the novelty of the work have not been elaborated clearly.
- At the end of the Introduction section, the research gap in the literature and the novelty of the present research should be stated clearly.
- A flowchart depicting the steps followed for the study would add value to the manuscript.
- Please mention if the researchers have conducted the Uncertainty Analysis (of instruments and of the performance findings) in order to make sure the reliability of the experimental observations.
- Further, the researcher can also validate the findings using mathematical, analytical, or numerical modelling.

The paper is not acceptable in its current form. However, the authors should be allowed to address the above comments and make the paper more meaningful to the literature.
