

Review of: "Visualization of Home Security Sensor System Based on IoT Server"

Anshul Gaur

Potential competing interests: No potential competing interests to declare.

Useful article but novelty can be increased. Require proper editing to remove punctuation and grammatical errors. The authors may propose some visual fire sensing techniques as nonvisual particle based sensors such as MQ series sensors have particle delay effect. Very few sensors (only two) are used. Multisensors systems are presently in use to prevent from fire and increase security features.
