Hello dear Andrzej,

I hope all is well with you.

The paper subject is interesting but there are some shortages to your paper as follow:

1. Your paper is alike a letter. It is just including some paragraphs about neuro-intelligence and economic. It is better to make a comparison between neuroeconomics & classical economic.
2. Please explain why are you selecting Russia as a sample (case study)?
3. It is better to dedicated a part to traditional economic models and neuro-intelligence ones!
4. You can do SWOT analysis of applying neuro-economics.
