The article title is attractive but author is not able to defend his claim. It seems like author took it from his thesis and submit it without making any modifications. So, first author should make sections and subsections instead of chapters. Secondly, Mathematical portion is ok but author should add an example to defend his claim. After adding example the article looks very sound. So, my suggestion is to modified your article from thesis style to article style and add example of your scheme. Provide analysis of symmetric key cryptosystems.
