I have keenly reviewed this manuscript entitled "A New Record of *Elymnias caudata* Butler, 1871 (Insecta: Lepidoptera: Nymphalidae) from Nagpur in Central India." I have a few suggestions to improve it.

- 1- The abstract is short and does not clearly reflect the overall study.
- 2- The introduction must include the hypothesis and objectives of your research.
- 3- Scientific names should be italicized.
- 4- The results section needs more research, as new records of a species require more authentication methods or tools (molecular level/morphology) to identify a species rather than two photographs of the specimen.
- 5- It seems an unscientific way of conducting research to publish a paper in this form.

Good luck!
