Potential competing interests: No potential competing interests to declare.

Manuscript "Heritability and Genetic Correlations of Growth Traits Among Inbred Population of Nigerian Chickens" is very important.

Two types of heritability are considered in breeding: the broad-sense heritability and the narrow-sense heritability.

Why was only one of these types used in the manuscript? It should be specified.

The Authors incorrectly stated the formula for the genetic correlation coefficient. The formula provided is for phenotypic correlation. It should be corrected.

Paper needs major revision.
