# Soluble Tumor Necrosis Factor Receptor Superfamily Member 1A

National Cancer Institute

## Source

National Cancer Institute. *Soluble Tumor Necrosis Factor Receptor Superfamily Member 1A*. NCI Thesaurus. Code C147053.

Soluble tumor necrosis factor receptor superfamily member 1A (~18 kDa) is encoded by the human TNFRSF1A gene. This enzymatically processed protein may be involved in the inhibition of binding and downstream signaling associated with binding of either tumor necrosis factor or lymphotoxin-alpha to the membrane-bound form of tumor necrosis factor receptor superfamily member 1A.
