Potential competing interests: No potential competing interests to declare.

The author coins a new term, Invasive Technology, which is fundamentally different from Disruptive Technology. Invasive technology, through its emerging path-breaking fundamental model (based on a mathematical model) of transformers, has developed radical innovations like GPT. Disruptive Technology, on the other hand, introduces a different performance package from mainstream technologies. This clear distinctive idea between these two popular words has made this paper a must-read research. Furthermore, the author has successfully proven the invasiveness through regression analysis and several other analyses. Just a few comments on the Closing / Concluding Remarks. It starts with "Socioeconomic forces of the knowledge economy..." which throughout the entire page, the knowledge economy is only discussed once in Section 7.1. This appears incoherent to the main theme of this paper. Suggest starting with "This study proposes, for the first time, the invasive behaviour of technologies..."
