

# Review of: "Seroprevalence of parvovirus infections from vaccinated and unvaccinated dogs of Andhra Pradesh"

W. Jean Dodds

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

This paper augments what has also been found with using both the ELISA and HI methods in other areas of the world to determine the prevalence of CPV exposed in vaccinated vs unvaccinated dog populations.

The data are presented and defended in an appropriate manner.

One suggestion to add about lines 3-4 of the second paragraph of the Introduction: " ---- although the currently licensed CPV-2 vaccines are stated to immunize against the CPV viral core and thus should protect against any new emerging variants as well."
