

Review of: "Artificial Intelligence & Nature-Based Solutions in Agriculture: A BT Cotton Pest Management Case Study in India"

Dr. Pramod Kumar Poladi¹

¹ SR Engineering College

Potential competing interests: No potential competing interests to declare.

Two more keywords can be added.

It could be better if "Introduction" and "Literature Review" are separated.

The literature review can be in a tabular form with columns for authors, methodology used, and gaps found to address a problem.

Experiment results are good and explained neatly.

It is better to mention the problem statement and objectives clearly.

The proposed methodology for experimentation and the results discussion can be made as separate sections.

Final conclusions, and future scope if any, can be added at the end.

Overall, good idea and good experimentation.
