Potential competing interests: No potential competing interests to declare.

This article is quite interesting as it discusses language from a quantitative point of view. There is a lot of numerical data, therefore, researchers must give meaning to the findings in the form of numbers qualitatively so that the results are more meaningful.

Researchers must provide detailed and rigid state of the art and novelty claims. Researchers must write the contribution in the abstract so that readers can easily grasp the purpose and objectives of this article. Researchers must write limitations in the conclusion.
