Title: Prednisolone Induced Gingival Enlargement: A Rare Case Report

There is novelty in this manuscript. It is scientifically well written and can be taken up for publication with certain corrections.

If the author has followed up the case, then they can add information about the healing of the surgical treatment done for the correction of gingival enlargement and also can enlighten readers about the chances of recurrence in such cases. This can be added to the discussion.

There is no mention of the medication, i.e., prednisolone, whether it was stopped or if any substitute medicine was advised. Otherwise, this may again lead to recurrence of the condition. This should have been mentioned in the management of the case.

The author can provide the photo of the radiograph done in this case to support the gingivectomy procedure done in this case and not the flap surgery.
