Lymphoepithelioid Variant Peripheral T-Cell Lymphoma

National Cancer Institute

Source

National Cancer Institute. *Lymphoepithelioid Variant Peripheral T-Cell Lymphoma*. NCI Thesaurus. Code C7205.

A variant of peripheral T-cell lymphoma, not otherwise specified. It is characterized by the presence of neoplastic small lymphocytes infiltrating the lymph nodes in a diffuse and less frequently interfollicular pattern. There is an associated proliferation of epithelioid histiocytes forming confluent clusters.
