**Potential competing interests:** No potential competing interests to declare.

Although the idea of this article is very interesting, there are a number of gaps in it.

1. The abstract can be improved so that the reader can easily understand the exact purpose and objectives of your work.
2. If it is a review article, its construction is okay, but if it is a research paper, please add at least some methods and data relatively.
3. The conclusion is written without substance.
4. Overall, the article contains parts of the discussion that are well known in the scientific community, and such a simplistic discussion is not desirable.
