Potential competing interests: No potential competing interests to declare.

The author attempts to present an encryption using the barcode technique. There is a huge scope for improvement considering the following issues.

1. The abstract needs to be modified with proper English usage. The sentences do not seem to have continuity and lack context.
2. Results section seems to be totally missing. Without experimental results, it is difficult to accept the claim of the authors regarding their contribution. Results are expected to support the claim made by the authors with reference to their primary objectives.
3. Due emphasis should be given to the authors' own contribution, which in turn should be presented effectively.
4. Overall organization of the paper needs improvement.
5. Few figures are missing. The complete paper needs to be checked for such errors.
