

# Review of: "Mycetoma in Animals a Review of Cases Reported From 1925-2022; Epidemiology and Management Strategies"

Andréia Spanamberg

Potential competing interests: No potential competing interests to declare.

The work shows a major review of Mycetoma (eumycetoma) and (actinomycetoma) in domestic animals, indicating the main agents involved and the route of transmission. It also highlights the antifungals used in treatment and the importance of differential diagnosis, showing the need for histopathological, molecular, and mycological/bacteriological examination to correctly identify the agent involved.
