

# Review of: "The use of Phytochemical, GC-MS Analysis and Hepatoprotective Effect of the Methanol Leaf Extract of *Camellia Sinensis* (L.) Kuntze on Paracetamol-Induced Liver Injury in Wistar Rats"

Retem Chahira

Potential competing interests: No potential competing interests to declare.

We start with **the title**, as I think it is advisable to change it because it lacks good writing style.

**Introduction:** In the third paragraph, the last part does not contain the reference before the end point of the paragraph.

I can also touch on **references** that are written in et al. They must be written in *et al* (*italique*), while the reference (Mohammed Golam Rasul, 2018) writes together the name and surname of the writer, while the reference consisting of one writer writes only his (surname , year) without the name.

**Materials and Methods and Results:** The work in these two parts is excellent and full of information and important results in our lives.

**The conclusion:** Lacks perspectives, and it would have been better to formulate it better than this.

**Discussion:** I did not find the designated part in the explanation: Histopathological examinations of the liver of rats.

**References:** In some references, the name of the journal is usually written *in italique*, but in most of them, it is not written in this way (exp: Molole *et al.*, 2022). As in some references, I can't find the page number (exp: Olivia *et al.*, 2021). I also confirm that the volume is written in G.
