Plasmablastic Lymphoma

National Cancer Institute

Source

National Cancer Institute. *Plasmablastic Lymphoma*. NCI Thesaurus. Code C7224.

An aggressive diffuse large B-cell lymphoma frequently arising in the setting of HIV infection and characterized by the presence of large neoplastic cells resembling B-immunoblasts which have the immunophenotypic profile of plasma cells. Sites of involvement include the oral cavity, sinonasal cavity, skin, soft tissues, gastrointestinal tract, and bone.
