

# Review of: "Leveraging Fine-Tuned Large Language Models in Bioinformatics: A Research Perspective"

Shashikant Patil

Potential competing interests: No potential competing interests to declare.

The subject matter of the article is commendable. However, the article lacks empirical substantiation through experimentation. It is advisable for the author to provide analytical evidence to support the presented concepts. Merely offering a theoretical framework is insufficient to establish the validity of the author's proposition. A comprehensive empirical investigation is necessary, followed by a comparative analysis of the obtained results with the existing state-of-the-art methodologies.
