Potential competing interests: No potential competing interests to declare.

This research is interesting and overall very good, but I have minor comments for clarification regarding:

1. Abstract: The author can explain in more detail.
2. Materials and methods: Could researchers explain how many lysogeny values were obtained using spot tests?
3. In the first, all abbreviations should be written in detail, and then the abbreviation can be written.
4. Discussion: Are there any limitations to this study?
