Lethal congenital contracture syndrome type 3

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. [Lethal congenital contracture syndrome type 3](#). ORPHA:137783

Lethal congenital contracture syndrome type 3 is a rare arthrogryposis syndrome characterized by clinical features identical to Lethal congenital contracture syndrome type 2 (i.e. multiple congenital contractures (typically extended elbows and flexed knees), micrognathia, anterior horn cells degeneration, skeletal muscle atrophy (mainly in the lower limbs), in the absence of hydrops, pterygia or bone fractures), but without bladder enlargement.
