Limbic encephalitis with NMDA receptor antibodies

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Limbic encephalitis with NMDA receptor antibodies. ORPHA:217253*

Limbic encephalitis with anti-N-methyl-D-aspartate (NMDA) receptor antibodies is a recently described type of encephalitis (see this term) affecting young women with teratoma of ovary (see this term) and associated with antibodies that react with neuronal cell surface auto-antigens.
