SFRP1 wt Allele

National Cancer Institute

Source

National Cancer Institute. *SFRP1 wt Allele*. NCI Thesaurus. Code C95301.

Human SFRP1 wild-type allele is located in the vicinity of 8p11.21 and is approximately 48 kb in length. This allele, which encodes secreted frizzled-related protein 1, plays a role in the modulation of Wnt signaling. Methylation of the gene is associated with decreased expression and may be a factor in both colon and breast cancer.
