

Review of: "[Review Article] Green Strategies for the Synthesis of Quinolone Derivatives"

Ammar H. Al-Sabawi¹

¹ University of Mosul

Potential competing interests: No potential competing interests to declare.

1. Changing the title of the review because it is not consistent with the content, as the review contains many traditional methods for preparing quinolones
2. Rewriting the introduction to avoid repeating some words more than once, for example, "antibacterial"
3. Rewriting the antimicrobial paragraph due to a lack of clarity in the topic and communication of the idea
4. Rewriting the anti-cancer paragraph
