Intermediate Grade Ductal Breast Carcinoma In Situ

National Cancer Institute

Source

National Cancer Institute. *Intermediate Grade Ductal Breast Carcinoma In Situ*. NCI Thesaurus. Code C9456.

Ductal breast carcinoma in situ characterized by the presence of monomorphic neoplastic cells that form cribriform, micropapillary, or solid patterns. Intraluminal necrosis is present in some ducts. Ducts that contain neoplastic cells with occasional nucleoli and coarse chromatin may also be present.
