Potential competing interests: No potential competing interests to declare.

The authors' efforts are appreciated; however, I recommend referencing the latest studies to strengthen this review, given its broad scope. One positive aspect of the work is its visually appealing infographics, which effectively engage a general audience. The language used is also engaging and accessible. While the authors aimed to cover a wide range of topics in a brief review, they should strive to align the content more closely with readers' expectations and the interests of those in related research fields.

The manuscript would benefit from thorough grammar checks, as several sentences are unclear and contain typos. The lack of a clear structure is noticeable, and certain points could be omitted to make room for more technical studies and their outcomes. This adjustment would likely enhance the manuscript's quality. The conclusion, while presenting a broad summary of the results, could be improved by offering a more focused discussion of the findings, future directions, and critical insights.

In summary, I believe these suggestions will enhance the manuscript's overall quality and impact. Thank you for considering these points. Your efforts are appreciated.
