Review of: "Artificial Intelligence in Experimental Surgery: Ethical Breakthroughs and Technological Innovations within In Silico Models"

Peter Chinedu Agu^{1,2}

1. Biochemistry, Evangel University, Nigeria; 2. Pharmacy, Southwest University, Chongqing, Chongqing, China

1. In the methodology, you should be specific about the literature search cut-off date. "Till specific date" is a subjective statement.
2. Provide specific references for each type of surgery specialty in Table 1.
3. Authors should add a declaration on the extent of use of AI in this study.
4. I recommend that the manuscript should be accepted with minor revisions as I recommended.
5. Thanks.
