

Review of: "Big Data, Granger Causality Analysis, and the Undecidability Property of Neuroimaging"

Heba Elsegai

Potential competing interests: The author(s) declared that no potential competing interests exist.

The idea is great to work on really, but there are a couple of issues need to be amended:

- 1- The language is a bit informal throughout the paper, especially in the abstract part as well as the introduction part.
- 2- There are a couple of repetitions in both the abstract and the introduction.
- 3- Good detailed introduction to Granger causality and other things, however, I can't see or understand what the results are of this research, which gives me an impression that this manuscript is still ongoing incomplete research! This is unclear and need to be clarified.
