

Review of: "A Discussion on Our Universe Boundaries"

Romulus Breban

Potential competing interests: No potential competing interests to declare.

The physical formalism used in the manuscript is not appropriate for a general discussion about gravity and, particularly, black holes. The work should be completely rewritten in the parameterized post-Newtonian formalism. Then, it remains to be seen to what extent a discussion about the universe boundaries is satisfactory for most work in cosmology and black holes. The author left out the theory of black-hole space-time extensions, which could be highly relevant here.
