**Potential competing interests:** No potential competing interests to declare.

This paper is, of course, needed for the hour where change is welcome, but I have a few suggestions and modifications for the paper to be better understood by the target audience,

The introduction can be well structured to convey the requirements of the paper and the exact concept of the paper, and it can brief and define the precious ill effects and present studies' maximum benefit to the community, as well as on what basis this paper was written.

The methodology can be a well-structured one, quoting the recruitment details of the study for better understanding and future progress of the study by other interested people. It can be stated in detail if it is a review paper or an analysis of previous papers with a scoping review and other details like the year of recruitment and the period of studies carried out.

The discussion should be more elaborative, with field relevance at the end of the study, and it should state a proper conclusion.
