**Potential competing interests:** No potential competing interests to declare.

As per the title, the work presented in the manuscript seems to be an application of Selleri Transformations. The technical aspect of applying Selleri transformations is unavailable in the article. Moreover, I believe the justification for the problem is not found in the manuscript.

Additionally, the Turnitin plagiarism report reveals the fact that the work presented is not new and that the novelty of the same is acclaimed in the article.

I cannot proceed to recommend the article for publication.

With Regards,
