Dear Author,

There are many articles on the variations of the Brachial artery, you can search and get so many. But if you are presenting this variation I think you have to work on a few things.

1. Image is not very good, the background of the image should be clean, it's too rough. Please see other articles of good journals; you will get an idea.
2. In discussion, embryology only is discussed. In title, you can add embryological review, etc?
3. In discussion, a comparison should be done with other studies showing brachial artery variations. A table can be added.
4. Prevalence of this variation, unilateral or bilateral, should be mentioned.

All the Best
