**Potential competing interests:** No potential competing interests to declare.

The authors have projected a very novel topic on the delivery of proteins and peptides and the recent advancement in nanotechnology for their delivery. The authors need to focus on the following aspects

1. The introduction is not well developed. There should be more justification on why nano delivery is preferred and projected over conventional delivery, with examples citing the drawbacks associated with the conventional form
2. The overall review has listed only the types of general nanoparticles, but missing significantly the challenges associated with the development of protein and peptide nanoparticles
3. The review is not updated with the present scenario of the peptide delivery and the future aspects of the same
4. Overall the review looks insufficient to cover the vast and important topic of the present research
