Potential competing interests: No potential competing interests to declare.

In Abstract:

In the Results section, instead of writing "the participants were 31.5 (SD= 6.82, Range: 16-48) years old," write correctly like .... the participants were 16-48 years old (mean age 31.5 years, SD=6.82).

In Methods:

In the study survey, instead of copying, it should be coping.

In Sample Size Calculation, why did the number of participants increase when the size of the sample was already declared to be 61? How did it become 73? The statement needs to be rephrased.

In Results:

In 3.2. Modifiable factors associated with the COVID-19 pandemic among persons with SUD, Table 1 shows p-values ... the significant p-values must be steric to differentiate them visually within the table.

Similarly, for Table 2, p-values that are significant must be steric to indicate the differences.

Rest of the manuscript is sufficient, including references.
