Dear authors, I really enjoyed reading your paper, I can see the hard work behind it. But I think there are some things that could be improved. Below are my suggestions:

- First: The author's article still lacks theoretical contribution. What is the significance of this article? Why is it being published? Say it in the introduction and allow the reader to understand.
- Second: The literature review this piece of excessive accumulation, should be divided into the relationship of presentation, it is suggested to be carefully modified.
- Third: The conclusion must be based on the full text, and should not only be a simple summary, more should be expanded on the basis of the conclusion.
- Fourth: The proposal must be based on the conclusion, belongs to the full text of the customized recommendations. However, the recommendations in this paper seem to meet the requirements.

Good Luck!
