Potential competing interests: No potential competing interests to declare.

This research deals with human-wildlife conflict, focusing on human-elephant interactions in Gabon. The study used a qualitative research approach in collecting and analyzing the data. The frameworks synthesized from the thematic analysis are very unique to Gabon, particularly the two villages.

The narrative of the writing was also appropriately written, in a way that was clear, coherent, and concise. Although the length of the manuscript is a bit too much, it is understandable when looking at the interview results.
