Overall, the authors really did well. A very informative research indeed. The statistical analysis is also very good.

A few suggestions for the respected authors to increase the quality of the paper:

The paper is well-written. Please check if there are any grammatical mistakes.

Please add the sample size calculation if you used any statistical sample size calculation method.

The sampling technique is also missing. It would be good if the sampling technique were discussed in the method section.

Additionally, if authors used any tests to verify the statistical assumptions, please add them too.

Thank you and good luck.
