Potential competing interests: No potential competing interests to declare.

1. No need to mention tuberculosis in your introduction, data about anti-TB drugs is enough in your introduction
2. What's your rational in a taking tissue samples from kidney and spleen as your study on the liver?
3. In the section of the Histological analysis, please mention methods, type of the stain used and the assessed parameters
4. Please refer to the histological findings by arrows in the figures
5. In the table 3 you mention splenomegaly in column of Centrilobular hydropic degeneration; this is not applicable. How you measure spleen through histological analysis? Please supply us with figure or morphometric measure?
