Thank you for your invitation to review this article. The article is timely and the author has done a good job articulating it. However, some of my suggestions could potentially improve the article. They are outlined as follows:

1. The author can differentiate this manuscript and the previous article to establish the novelty more clearly. Since this is a survey article, how is this survey different from other recent surveys? I believe the author can present this information.
2. Could the authors be more specific about the limitations of previous research articles in his survey?
3. I believe if the authors can present transparency in article selection, it would also enrich the authenticity and integrity of this research.
4. The author can also present the future research directions and possible methodologies to be adopted. it would also increase the readability of this manuscript.

Thank you for a nice manuscript. I wish the article will be improved by the author in future.
