Potential competing interests: No potential competing interests to declare.

The topic of the review article is unique and interesting, however there are certain limitation which the authors should be considered to make it better. 1. why did the author focused only on copper nanoparticles, what is the unique property associated with them that make them better in treating viral infection as compared to other widely known nanoparticles such as AgNPs, AuNPs etc. 2. Discuss the hypothesis or mechanism, what the authors want to say should be explain clearly. 2. The way the abstract and introduction was explained can be improved and latest references should be added to support the study. 3. this review can be made more exciting by explanations through figures and tables, list different viral infection treated by nanoparticles.
