# Polish Lowland Sheepdog

National Cancer Institute

## Source

National Cancer Institute. *Polish Lowland Sheepdog*. NCI Thesaurus. Code C54054.

The Polish Lowland Sheepdog is medium-sized, strong and muscular, with characteristically long, hanging hair that covers the eyes. The profuse hair on the forehead, cheeks and chin make the head look bigger than it actually is. It is doubled-coated and the body is covered with a long, dense, shaggy, thick coat that is reasonably straight. The undercoat is soft and dense. Ears are heart-shaped, drop, and set moderately high. Height: 17-20 inches.
