Interesting study

Abstract section: Under results – relevant statistical values can be given here.

Introduction: What did the literature search reveal? Were there more similar studies that were conducted?

Results: The analysis could have been more detailed. 18–70-year-olds were selected for the study. The analysis could have been done in subgroups: 18–30, 31–40, 41–50, 51–60, 61–70, as well as by gender, noting any detectable differences.
