

Review of: "Perspectives on the Immune System in Sepsis"

Gaoli Liu

Potential competing interests: The author(s) declared that no potential competing interests exist.

This manuscript provides an updated review of the molecular and clinical mechanisms of sepsis. The author has made a good discussion on the treatment ideas of sepsis.

But there are some areas for improvement

1. One-third of the references are before 2015, which is a bit old as a review article reference.
2. The content of the abstract does not summarize the full text, but only emphasizes molecular level stemming.
3. The content of the pathology section appears to emphasize inflammatory mechanisms or inflammatory pathways.
4. The article does not summarize the content discussed, and the thinking is not clear enough.
