Potential competing interests: No potential competing interests to declare.

Below are the main points of reviewing this article:

1. Abstract

1. The English language is clear and concise.
2. More details regarding the revision's main points are required.

2. Introduction is good and no further requirements are required.

3. It is better to improve the quality of Figure 1 with a brighter background.

4. Section 3 (NMs and their applications): It is better to improve the presentation with a table comparing all subsections.

Similarly for sections 4 and 5.

5. Conclusion is weak; better presentation for the entire article is necessary.
