Review of: "Implementing Task Substitution for Doctors and Nurses as a Key Element of Healthcare Reform"

Chidinma Stephanie Madu¹

1. Duke University Health System, Durham, United States

This manuscript presents a well-structured and comprehensive review of task substitution through the integration of Advanced Nursing Practitioners (ANPs) to address global healthcare workforce shortages. The topic is timely and relevant, with a clear rationale and global perspective. The comparison across countries is robust and supports the feasibility of ANP role expansion, especially in Poland. The methodology, while primarily narrative, is supported by data and extensive references.

Strengths:

Clear objectives and structure

Extensive international comparisons

Strong use of current, peer-reviewed literature

Practical recommendations for policy and education reform

Limitations:

Lacks empirical data or original research

Redundant sections could be streamlined for conciseness

Occasional repetition and minor editorial issues

Conclusion:

The article is a valuable contribution to the discourse on healthcare workforce reform and ANP integration. With minor editorial refinement and a tightened structure, it is suitable for publication.
