

# Review of: "Analysis of Factors Influencing Health and Safety Programme in Selected Electricity Distribution Companies"

Rajan Ghimire

**Potential competing interests:** No potential competing interests to declare.

It is a pleasure to read and review this article. It would be better if the author/authors could address the following issues.

The introduction is quite long. Try to make it short and concise.

Please provide the formula for sample size calculation.

Out of 400 samples, 385 were analyzed. What happened to the rest of the samples?

Please provide separate results and discussion sections. In the results section, generally, the findings of the study are presented and then compared and contrasted in the discussion section.

Table 4.1 to 4.4 contains a categorical variable, and you have calculated the mean and SD. Please consult a statistician.

Provide an interpretation of the statistical tests. What do these tests indicate?

Provide a relevant description of tables 4.5 to 4.8 and confirm with a statistician if the tests done are relevant. Please clearly mention the variables tested where not provided.

Please rewrite the results and discussion sections as per standard norms or journal guidelines.

Only a few components of the questionnaire had a significant association, so mention those factors only, not the whole one like this in the conclusion: 'This study proved that the factors influencing the health and safety programme identified and analysed had a significant effect on the selected electricity distribution companies in the Southwest, Nigeria.'

Try to include the latest references, preferably not older than 15 years.
