Potential competing interests: No potential competing interests to declare.

Abstract:

- Background; mention why both species were evaluated together
- Weak problem statement; the toxic effects of the plant should be stated
- Method: Incorporate oral administration
- Results: Provide values for key findings in this study

Methods:

Detailed methods for the following items are missing, yet they are reported in results section.

- water/feed consumption data collection
- physical examination
- hematological test
- biochemical tests
